

Grow Your Veggies with GrowCover

GrowCover is designed to protect and encourage healthy growth in your seedlings and plants. Whilst it does this superbly well, it also has the additional benefit of excluding most flying insects, grasshoppers, birds and other plant predators. If you are growing organically this is a real plus.

Nothing gladdens your heart as a gardener more than seeing your carefully prepared garden beds full of healthy plants. Conversely nothing saddens you more than to see all your carefully nurtured plants shredded by insects, damaged by strong winds or hail or killed by frost. **GrowCover is your first line of protection against all these hazards.**

GrowCover will help make your garden a productive source of fresh, healthy herbs and vegetables.

How you use GrowCover will depend on your particular needs but you can easily make support frames from 25mm rural poly pipe or 20mm pvc plumbing pipe. GrowCover is ideal with drip irrigation thus reducing the chance of accidentally allowing unwanted insects inside.

It can also be laid flat on a seed bed to help germination or thrown over fruiting plants.

GrowCover can also be used to protect your orchard fruit from insects, including fruit fly, but is best used spread over a frame using poly pipe rather than in contact with the leaves.

GrowCover itself is made from heavy duty Polyethylene (HDPE) and it is woven which means that it is resistant to tears and accidental cuts, which should they occur, rarely run. Because it is designed as a plant propagation material it is designed to let in sunlight, (84% of sunlight penetrates). GrowCover also 'breathes' so avoids problems of extreme heat and condensation experienced under plastic.

It creates a microclimate which allows earlier spring planting by raising the soil temperature, and helps to reduce moisture loss in hot weather.

Long Lasting

GrowCover is long lasting with normal use. The manufacturer claims a life of 8 years.

Grow Tunnel using GrowCover Fabric

Easy installation

Grow tunnels made from GrowCover are very easy to move or resize as it is light (35g per m²) and easily handled. It can even be joined with a domestic sewing

A heavier duty GrowCover HD is available, for semi permanent garden structures. It is less permeable to rain than the standard GrowCover, weighs 80g per m², allows through 81% sunlight and is easier to sew for fitting to a frame if preferred.

machine.

GrowCover and GrowCover HD:

- Promotes strong, healthy and vigorous seedling and plant growth
- Creates a micro-climate, reduces watering and evaporation loss
- Ideal for use with drip irrigation
- Allow in air, rain and sunlight
- Protects from most flying insects
- Protects from strong winds and hail
- Protects from light frost (up to -4°C)
- Protects fruit trees from birds and insects
- Allows through 81% or 84% of sunlight
- Resists tears and cuts, which don't run.
- Light and easy to handle
- Can be used over many sorts of frame
- Can be laid flat on ground to promote seed germination

GrowCover and GrowCover HD available in some standard sizes and by custom length, some restriction apply due to postage regulations
